

SUPADENSE

Dense know *for engineers.*

An AI-powered Knowledge Workplace that makes engineers
actually learn back what they read.

supadense.com

*Your notes app is a gravey
We're building the heartb*

THE PROBLEM

100s

OF HOURS / ENGINEER / YR
SPENT RESEARCHING

10%

RETAINED FROM WHAT
THEY ACTUALLY READ

Engineers ship more, faster, in 2026 than ever before — and lose more of what they learned than any generation before them.

supadense

Eight pains. One pattern: *knowledge leaking.*

01 - RABBIT HOLE

Hunting quality for hours

"Finding quality is a full-time job. You already have one."

02 - FORGETTING LOOP

Reads everything, remembers nothing

"The graveyard of good intentions."

03 - THE WAVE

Drowning in new knowledge

"Learning to drown quietly."

05 - MEETING MOMENT

Behind in every technical conversation

"They're not smarter — they have better infrastructure."

06 - STARTING FROM ZERO

Solving the same problem twice

"Stop solving the same problem twice."

07 - SCATTERED CONCEPTS

The same question searched weeks

"Everything in one place."

Are you an engineer who...

01 — THE DROWNING READER

You read everything and *retain nothing* — tired of starting from zero every time.

02 — THE STACK-STAYER

You want to *stay ahead of your stack* without spending hours hunting resources.

03 — THE MID-LEVEL CLIMBER

You are grinding toward *close your knowledge gaps* fast.

05 — THE STAFF VETERAN

Years of knowledge live in your head with *no system to carry it forward*.

06 — THE FIELD-TRACKER

You are a researcher or ML engineer tracking a field that *moves every single week*.

07 — THE INTERVIEW SWITCHER

You are switching jobs at every interview *knowing u*.

Optimize for *storage*.

Notion. Obsidian. Apple Notes. They're filing cabinets. Silent, passive, dead. The list grows. Your knowledge doesn't.

THE SHIFT

Not storage. *Intelligence.*

A workspace that doesn't wait for you to come back. It works while you sleep
— connecting, reminding, evolving.

supadense

INTRODUCING

supadense

A *Knowledge Workplace* for engineers —
that gets smarter every day you use it.

AI-NATIVE

PERSONAL-FIRST

PROACTIVE

supadense

Surfaced for you · 14

Past-you wondered

- Karpathy on context win

- A small note on tree-sit

12 notes · 3 gaps · ↗

Four loops, running quietly. Each makes the next *denser*.

01

Personalize

Captures your goals. Asks the right questions. The system gets a model of you, not the other way around.

02

Sprint

By project. Each sprint is denser than the last — building on what you already know, not starting cold.

03

Retain

Spaced repetition + gaps. Retains ideas at the moment they're most useful.

Three things, *not thirty*.

The Today queue caps itself. The signal is curated. The rest is archived.

You are never "behind" on Supadense.

Tuesday · 14:32 · 12-day streak

 **Introducing Supadense**

Knowledge Workspace for engineers to help you learn and grow

It's not a notes app. It doesn't just store resources and sits back.

Its an intelligence layer that makes you learn by being proactive about your personal learning goals/gaps.

You should

THE MOAT

Compounding knowledge. *The big moat.*

Every Supadense session makes the next one denser. The product can't be cloned by feature or years of your own data.

supadense

Every engineer is reading more,
retaining less.

All of them are our market.

What engineers told us *in their own words*

Sourabh Singh

4 YRS • SOFTWARE ENG • MNC

"I learn by asking questions. I keep giving the same context, from scratch, every time. There's no personalization."

WOAH MOMENT

The **graph view** — he could finally see what he'd actually learned.

Sunny Mane

3 YRS • SOFTWARE ENG • AMAZON

"I have a real problem retaining knowledge. But how is this actually different from NotebookLM?"

WHAT WE HEARD

The pain is **obvious**. The wedge — *spaced retention, not Q&A* — needs to land in seconds.
